DÉVELOPPEMENT DURABLE ET SANTÉ...WHAT IS IT?

Selon *La santé de l'homme*, n°395, "Développement durable et promotion de la santé, 2008

"Les êtres humains sont au centre des préoccupations relatives au développement durable. Ils ont droit à une vie saine et productive en harmonie avec la nature. » Au Brésil, à cette occasion a été reconnu le lien étroit entre la santé et l'environnement à travers l'adoption du Plan d'action 21 par les gouvernements de cent quatre-vingt-cinq pays."

"La « bonne » santé repose sur les trois piliers du développement durable – l'économique, l'écologique, et le social"

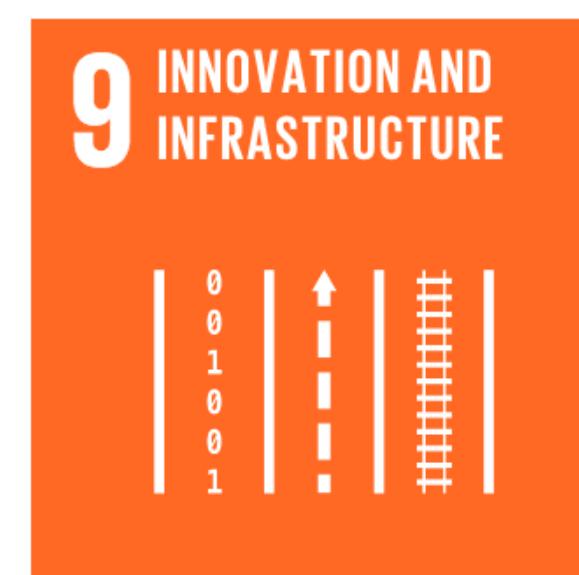

Déclaration de Rio

Rio+20 declares health key to sustainable development

Au Brésil, a été reconnu le lien étroit entre la santé et l'environnement à travers l'adoption du Plan d'action 21 par les gouvernements de 185 pays.

Sustainable development goals

Presentation of four goals in particular

**1 NO
POVERTY**

**2 ZERO
HUNGER**

3 GOOD HEALTH AND WELL-BEING

Objectif 3 de développement durable des Nations Unies : permettre à tous de vivre en bonne santé et promouvoir le bien-être de tous à tout âge

Poor air quality study

1) Definition of poor air quality :

Air pollution is an alteration in air quality that can be characterized by measurements of chemical, biological or physical pollutants

2) Causes :

The main causes of air pollution are related to the ignition of fossil fuels (coal, oil and gas). This occurs especially in industrial sectors and close to land transport.

3) Symptoms of poor air quality : Dryness and irritation of eyes, nose, throat and skin, headache, tired, shortness of breath, hypersensitivity and allergies, sinus congestion, cough and sneezing, dizziness.

4) Consequences :

According to the United Nations, air pollution causes 7 million deaths each year and is the main environmental health risk. Cities in China, Pakistan and Bangladesh are also among the biggest polluters.

II-Example of action for sustainable development : Paper recycling

At the Lycée Henri Sellier in Livry-Gargan, an action has been created to promote sustainable development. This action consists of placing cardboard boxes in all the classrooms of the high school. At the beginning of the year, students go to the new arriving classes to inform them of this project. The pupils have as homework to throw their paper in the specific paper bins and to throw only paper there. It is best not to crumple the paper before throwing it in. The recovered papers will then be recycled to be reused later. If this action is used in all schools, or in all schools in general, we can avoid cutting more trees. And reuse papers endlessly in addition to planting new trees.

3. Sorting waste in the high school canteen is an action of sustainable development. It helps to move buses forward with food waste gas

4. The impact on the health of high school students is in the air (O₂) they breathe while taking transport. With the new gas = less pollution So better health

3. Le tri des déchets à la cantine du lycée est une action liée au développement durable.

Elle permet de faire avancer les bus avec le gaz des déchets alimentaire

4. L'impact sur la santé des lycéens est au niveau de l'air qu'ils respirent en prenant les transports.

Avec le nouveau gaz = moins de pollution

Donc une meilleure santé
